

MOBILINX: BREAKING NEW GROUND IN CONSTRUCTION

CONSTRUCTION INDUSTRY

The Challenge

Mobilinx needed a solution to provide complete transparency into all projects and keep front-line participation rates high.

The Mission

Find a **safety software solution** that would give **complete transparency** into the safety program, **track trends and patterns**, and increase engagement levels

The Solution

The **Alcumus EHS management solution** offered the **simplest system** for the end-user and allows them to **create dashboards to perform real-time trend analysis**

The Impact

Established nearly **700 action items** with a **90% close out rate** and conducted over 1800 workplace inspections, over 200 hazard assessments, 80 coaching sessions, and 250 safety talks

Blazing a trail for others in the construction industry, **Mobilinx**, the Metrolinx Hurontario LRT constructor, is transforming the way people travel.

Working on large projects spanning multiple sites with hundreds of workers in the field at a time, Stewart Day, Health and Safety Director, needed a solution to provide complete transparency into all projects and keep frontline participation rates high.

When asked what made Alcumus stand out amongst competitors, Stewart said, **"It came down to two things: The end-user and data reporting."**

"Alcumus offered the simplest and cleanest system for the end-user and we knew this would be the most effective way to quickly get engagement from the field. The other requirement was data reporting. **This system allows us to create dashboards to perform real-time trend analysis on both leading and lagging indicators.** This makes reporting faster, more reliable, and **creates transparency** between the **front-line workers and senior management."**

Alcumus helped give Stewart and his team complete **insight into their safety program** to create a more data-centric approach. With streamlined two-way conversations between management and the frontline as well as access to an **in-depth view of the safety program**, this safety software option has made a positive impact on the organization, **allowing them to remain proactive when it comes to different risks on-site.**

90%
close out rate
on nearly
700
ACTION ITEMS

1800
workplace
inspections,
200
hazard assessments,
and
250
SAFETY TALKS
company wide

I've been able to cut the size of the team that was initially proposed, because the Alcumus system allows for leaner health and safety departments with greater transparency. You can get great insights into what is really happening with real-time reporting," says Stewart. "Without software I'd need additional dedicated administrators and there's so much we'd still be missing and not recording. The fact is, you can't keep up without software and real-time trends analysis.

STEWART DAY

Health and Safety Director,
Mobilinx
