

RICHCRAFT HOMES: BOOSTING COMPLETED CORRECTIVE ACTIONS BY 400%

CONSTRUCTION INDUSTRY

The Challenge

Safety management system was inefficient with regards to the hazard identification and corrective action process

The Mission

Improve hazard identification process, employee accountability and safety culture

The Solution

Switch to the Alcumus EHS management solution

The Impact

Significant time reduction in the hazard identification process

Using a **pen and paper-based safety process**, Richcraft's environmental health and safety (EHS) professionals suffered from a large administrative burden, having to first perform the hazard inspections and subsequently manually upload the data into the system.

Their initial hazard identification process used to take two weeks to complete, with only one to two corrective actions being assigned each month and only 50% of those correction actions being resolved and closed. With **infrequent reporting and only half of the correction actions being closed**, Richcraft was experiencing a poor safety culture and little employee accountability.

After making the switch to **Alcumus' EHS management solution**, Richcraft saw a **significant time reduction in the hazard identification process**. Using **Alcumus' mobile app**, Richcraft's previous two week long hazard identification process was reduced to two days, decreasing the time spent on hazard identification by 85%. Before using **Alcumus**, Richcraft's corrective action process used to take 15 or more days to close and has since improved to fewer than 5 days.

By allowing inspectors to assign corrective actions while completing their hazard identifications, Richcraft **grew the number of monthly corrective actions**, increasing their corrective actions by 400%. Furthermore, with an easier way for EHS managers to follow through on corrective actions, Richcraft is **now excited to report that 100% of corrective actions are being closed**, creating much more evidence of the reduction of workplace risk.

By **improving the hazard identification and corrective action processes**, Richcraft has also enhanced employee accountability with regards to health and safety. In turn, this has **helped the company develop a stronger safety culture**.

Two-week long hazard identification process reduced by

85%

Grew the number of monthly corrective actions completed by

400%

Alcumus has made at least 30% of my time more efficient, freeing up time for more important EHS management tasks.
