

# SPI HEALTH AND SAFETY: MAINTAINING ASSET SAFETY WITH ALCUMUS

## BUSINESS SERVICES

### The Challenge

Dealing with antiquated software, making it harder to scale

### The Mission

Keep up with the **thousands of inspections needed per year**

### The Solution

Implement an asset inspection solution which was **customizable, intuitive, and had a reliable mobile app**

### The Impact

The ability to **grow, save time, and build stronger relationships** with customers

SPI Health and Safety's in-house solution was not able to keep up with the thousands of inspections done a year, as the platform was not well-structured and could only run on a remote desktop server. This made it unreliable and cumbersome to use.

Providing SPI's customers with the proper documentation was another challenge they faced. **"Our customers need to know they can rely on us,"** Andrew, the Director of Technical Services, told us. **"If we didn't have something like the Alcumus asset inspection solution, it would've been an extremely difficult manual process to get those reports and certifications out."**

With SPI technicians already aware of the Alcumus tool, they mentioned its capabilities to Andrew and his team who began to explore how they could best leverage this solution. Realizing Alcumus was able to deliver on all their needs and more, the team at SPI never looked back.

Having the freedom to customize inspection, asset, and event templates according to their needs was a game changer for Andrew and his team. The Alcumus mobile asset inspection solution also offers a reliable online and offline mode to help technicians when working in remote locations to continue collecting data without interruption. This has helped boost productivity and efficiency with Andrew and his team when working on-site.

**70,000**

assets uploaded in Alcumus

**4,500**

sites assigned

**30,000**

visual inspections completed a year

It was an a-ha moment for us. What turned the tide in our eyes was the ability to go in and build templates and control our destiny from an operational standpoint. Having a tool that allows us to grow, provides easy access, and is intuitive for the technicians, has made us more productive over time."

**ANDREW SAABAS**

Director of Technical Services, SPI Health and Safety
